Eweguard Plain 500ml

For the treatment and control of internal parasites and nasal bot of adult sheep, and for the prevention of 5 clostridial diseases.

Active ingredient: Moxidectin 1mg/ml

- Ultimate protection 6-in-1 vaccine and wormer, in one single shot
- Protects against Barber's Pole and *Ostertagia* 35 days, and *Trichostrongylus* 7 days
- Helps keep pastures cleaner for the newborn lamb

Eweguard Plus Selenium 500ml

For the treatment and control of internal parasites and nasal bot of adult sheep, and for the prevention of 5 clostridial diseases.

Active ingredient: Moxidectin 1mg/ml, Selenium 2.5mg/ml

- Ultimate protection 6-in-1 vaccine and wormer, in one single shot
- Protects against Barber's Pole and *Ostertagia* 35 days, and *Trichostrongylus* 7 days
- Helps keep pastures cleaner for the newborn lamb

Cyductin Injection 500ml

Protects cattle and sheep from parasite burdens with an easy-to-use injection containing moxidectin, the most potent macrocyclic lactone (ML).

Active ingredient: Moxidectin 10mg/ml

- Protects against *Ostertagia (Teladorsagia)* 35 days, *Trichostrongylus* 7 days
- Persistent worm control for ewes
- Use on poor conditioned single bearing, or well-conditioned twin bearing ewes

Cyductin Long Acting Injection 500ml

For the treatment and control of internal parasites and nasal bot of adult sheep.

Active ingredient: Moxidectin 20mg/ml

- Easy to use, a simple quick injection
- Protects against *Ostertagia* 112 days, Barber's Pole 91 days and *Trichostrongylus* 42 days
- Longer protection from worms means better productivity and cleaner pastures
- Ewes in better condition produce more milk and will have faster growing lambs as a result

PRE-LAMB 2021 CHECK LIST

Complete the form and leave it with your Farmlands Technical Field Officer or drop it into your local Farmlands store.

Donaghys Moxi LA Injection 500ml

Single active sheep injectable containing moxidectin in a long-acting base.

Active ingredient: Moxidectin 20g/L

- Protects against *Ostertagia* 112 days, Barber's Pole 91 days and *Trichostrongylus* 42 days
- Reduce risk of exposure to parasites in pasture for young stock
- Best used pre-lamb and for long term Barber's Pole protection in replacement hoggets in autumn
